

Cast & Crew

Senior Product Manager

The Sr. Product Manager will be responsible for building high-quality and timely solutions to solve complex business problems. As a Sr. Product Manager, the Consultant will build easy-to-use and scalable product solutions to support business growth for customers and internal stakeholders alike.

The Consultant will work closely with Cast & Crew's customers and internal stakeholders to provide elegant solutions that solve real business problems and delight users. The Consultant will be required to gain a deep understanding of the Cast & Crew platform, payroll systems and processes which will be used to assist in defining the overall vision, roadmap and strategy of the product.

Essential Functions

- Product Strategy & Vision
- Define and drive the product strategy and vision for your product based on good judgement combined with heavy user research, stakeholder interviews and analytics, ensuring alignment with broader company goals
- Develop comprehensive strategies for major features or products, including market positioning and competitive differentiation
- Product Management & Delivery
- Build and maintain a high-value, feature-rich product roadmap with deep understanding of product relationships, integrations and system functionality
- Work with internal and external stakeholders to understand business needs, articulate use cases, and define clear product requirements through detailed user stories, PRDs, and other key artifacts
- Prioritize and manage an agile backlog in a demanding environment, working iteratively to continuously improve and optimize the product after delivery
- Plan releases proactively with technical counterparts, making scope adjustments as needed to keep delivery on track
- Cross-Functional Collaboration & Leadership
- Collaborate with cross-functional teams (Sales, Customer Success, Implementations, Support, Payroll Operations) to gather feedback and coordinate initiatives, proactively identifying dependencies and potential conflicts
- Partner strategically with department heads across Sales, Marketing, Customer Success, Finance, and Operations on competitive positioning, go-to-market strategies, and understanding their priorities
- Work closely with UX Design and development teams to ensure clear communication of requirements and direction for optimal user experience
- Research, Data & Customer Expertise
- Leverage internal SMEs and conduct strategic research to develop deep understanding of customers, their workflows, and business needs
- Analyze data to identify insights and diagnose issues, making informed product decisions that create value for users, the product, and company
- Maintain broad product knowledge across multiple areas and stay informed about entertainment industry trends to guide investment decisions
- Product Launch & Go-to-Market

- Lead comprehensive launch strategies including competitive positioning, customer segmentation, sales enablement materials (FAQs, demo scripts), and success metrics
- Coordinate launch timelines with Product Marketing and Sales teams, measuring adoption metrics and optimizing post-launch performance
- Technical Leadership & Quality
- Lead large-scale, cross-functional product initiatives including complex system integrations
- Assist with user acceptance testing and provide clarification for defect resolution, ensuring high-quality product delivery

Required Qualifications

- Bachelor's degree in a relevant field required
- 4+ years' senior product management experience building enterprise SaaS products
- Experience with file and other asset management platforms strongly preferred
- Effective at leading through influence across multiple competing stakeholder groups, with superior communication skills, both written and as a presenter
- Ability to translate technical or analytics concepts for a business audience
- Experience navigating and working with complex platform integrations
- Technical familiarity and/or ability to acquire in-depth knowledge of asset management principles such as data indexing, OCR and cloud storage across variety of cloud technologies (e.g., Azure, AWS)
- Strong execution-focus and ability to create an actionable plan amongst a certain degree of ambiguity
- Detail-oriented with excellent problem solving and decision-making skills

Preferred Qualifications

- Working knowledge of payroll, HR, accounting and entertainment industry highly preferred
- Experience with user research methodologies, hypothesis testing, and UX collaboration
- Track record of successful product launches with measurable business impact
- Success Metrics & Expectations
- Own a major product area or multiple interconnected features serving core user needs
- Drive significant influence on business metrics like retention, engagement, or revenue for your product area
- Serve as a go-to resource for product knowledge and customer expertise
- Successfully lead complex, cross-functional initiatives with minimal oversight
